Coal, 1340–1342
Lignite
Oil shale, 1511–1514
Specific surface area, 263–265
Minerals
Aromatization reactions, 355–360
Oil sand
Tar sand, 1455–1463
Petroleum
Fractions, 1231–1237
Pitch
Thermogravimetric analysis, 611–623
Swelling
Solvents, 635–640
Triglycerides
Hydrocarbon, 1291–1297

Radioactivity
Organosulphur compounds
Coal, 649–653
Rank
Acetylation
Oxygen, 45–52
Coal
Coalification, 851–869
Hydrocarbon
Structural properties, 303–310
Thermal upgrading
Spontaneous combustion, 3–8
Reactivity
Brown coal
Oxygen, 183–192
Coal char
Ignition, 1247–1253
Coal liquefaction
Chemical pretreatment, 1015–1023
Combustion
Ignition, 1239–1246
Crude oil
Combustion, 1499–1503
Gasification
Coal char, 349–350
Resinites
N.m.r., 1097–1104
Shale oil
Coking, 1427–1432
Residue
Conversion
Fraction, 1483–1485
Lignite
Sulphur, 1169–1175

Sediment
Distillate
Aromatic, 903–908
Sedimentology
Oil sand
Models, 1373–1376
Sewage sludge
Extraction
Pyrolysis, 1283–1289
Liquefaction
Fractionation, 1071–1073
Shale oil
Coking
Reactivity, 1427–1432
Gas chromatography
Thiophenes, 409–415
Petroleum
Fluidized beds, 1527–1537
Slurry
Agglomeration
Solid–liquid interface, 971–973
Sodium
Fly ash
Coal combustion, 15–18
Solubility
Coal tar pitch
Organic solvent, 295–297
Maltenes
Low rank coal, 925–928
Solvents
Asphaltene
Bitumen, 1349–1353
Macromolecular structure
Diffusion, 1271–1275
Pyrolysis
Swelling, 635–640
Spectroscopic analysis
Asphaltene
Petroleum, 53–57
Coal
Infrared emission, 469–470
Demineralization
Catalysis, 723–729
Steam injection
Heavy oils
Hele-Shaw cells, 1465–1471
Steranes
Aliphatic groups
Hopanes, 523–532
Structural analysis
n-Alkanes
Wax/gel, 533–537
Structural properties
Hydrocarbon
Rank, 303–310
Structure
Coal
Organic geochemistry, 1211–1223
Subbituminous coal
Liquefaction
Sulphur, 825–829
Sulphation
Limestone
Dolomite, 919–923
Sulphur
Chlorine retention
Boiler deposits, 131–142
Desulphurization
Coal, 779–783
Lignite
Residue, 1169–1175
Liquefaction
Subbituminous coal, 825–829
Tipong coal
Disposition pattern, 718–719
Sulphur dioxide
Beneficiation
Texas lignite, 65–73
Carbon
Gas, 1303–1308
Diffusion
Carbon, 575–578
Fluidized beds
Coal ash, 507–511
Limestone
Fluidized bed combustor, 841–844
Supercritical
Crude oil
Bitumen, 1519–1526
Surface area
Char
Carbonaceous samples, 1195–1202
Coal liquefaction
Porosity, 993–1002
Surface properties
Coal
Contact angle, 708–711
Swelling
Coal
Anisotropy, 1003–1014
Pyrolysis
Solvents, 635–640
Syncrude
Humic acids
Chemical characterization, 165–168
Oil shale
Project surveillance, 237–242

Tar sand
Bitumen
Fluidized beds, 1473–1482
Microbial activity
Pyrite, 1403–1405
Pyrolysis
Oil sand, 1455–1463

Thermal analysis
Coal
Calorific values, 579–583
Thermodynamic
Chemical structure
Ideal gas, 1329–1333
Gasification of coal
Coal bed, 431–435
Thermogravimetric analysis
Oxidation
Immersional heating, 443–447
Pitch
Pyrolysis, 611–623

Trace elements
Coal
Bituminous coal, 909–917
Sulphide, 1093–1096
Triglycerides
Pyrolysis
Hydrocarbon, 1291–1297

Ultracentrifugation
Bitumen
Oil sand, 1515–1518

Wastewater
Oil shale
PFH, 1385–1389

Wood
Charcoal
Combustion, 955–962

X-ray
Oil shale
Oldhamite, 273–275
X-ray diffraction
Mineral matter in coal
Quantitative, 346–348
